AIR

UNI SUPER INK
LOCKS IN YOUR
WRITING AGAINST
WATER
FADING
FRAUD

Model Code: UBAir

The revolutionary nib of the Air, unlike conventional rollerballs, is pressure sensitive, meaning that it gives a writing experience and differentiating line width similar to that of a fountain pen

Metal ball of the nib is encased in an acetal plastic, rather than the standard metal surround, which allows for a smoother flow of ink around the ball and an increased flow as further pressure is applied.

0.5mm ball delivers a line width of between 0.28mm and 0.45mm

Please contact your Sanford B2B representative for more information.

The pen Uni-ball Air only can be printed on the cap to a single color
